ABSTRACTED-PUB-NO: JP 11175288A

BASIC-ABSTRACT:

NOVELTY - A data processor designates printing time of a job and is stored sequentially in a storage unit. A timer performs the clocking of the time based on printing delay time. A controller controls the printing process based on clocking completion. DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for memory medium which stores computer readable program.

USE - For data processor.

ADVANTAGE - The early start of printing job is obtained by starting the printing process in order of user designation time.

DESCRIPTION OF DRAWING(S)

- The figure shows block diagram of the printing control apparatus.
